2/21/2014 – Release Notes

Expanding and Improving Integration

Intacct 2.0 (Phased Roll-out)

Our improved Intacct sync will enable users to keep Intacct and Bill.com up-to-date with no double data entry! The integration better allows you to pay your bills and get paid electronically, featuring a new two-way sync for AP bills and AR invoices/payments, and the ability to pay bills in Bill.com that were converted from Intacct POs. Contact us for more information about becoming an early user; the new sync will be publicly available for all new accounts in a few weeks, and we'll be ready to start migrating existing accounts in May.

We'll be holding a webinar to go over the new Intacct sync in more detail; keep an eye out for registration details!

Improvements to Import / Export

We're continuing to improve our Import / Export feature to make it more powerful and versatile than ever! Easily import and export data for any accounting system - now you can: Import Classes and Locations

- Import using Vendor ID or Customer ID (rather than just Vendor/Customer Name)
- Customize your import with Import Profiles – we adapt to your business practices
- Expanded Export - now export any type of record from Bill.com: Accounts, Departments, Items, Jobs, Classes, Locations, Bills, Payments, Invoices, Payments Received, and Funds Transfers!
- Easily import your transactions into Peachtree/Sage50 - we've added some key fields to our Transactions Exports to make them more compatible with Peachtree/Sage50.

We'll be holding a webinar to go over the new additions to Import / Export in more detail; keep an eye out for registration details!

Increasing Security and other requirements

Multi-Factor Authentication now protects all accounts

We take the security of your account seriously - beginning 3/3/14, all accounts will be protected by multi-factor authentication - from time to time, when performing certain actions within your account, users will be prompted to enter a security code which is sent to their phone in a text or voice message.

Bill.com Multi-Factor Authentication

Text addition to checks

To comply with regulatory and legal requirements, we have added our company name and patent number to all checks issued via Bill.com.

Improving User Experience

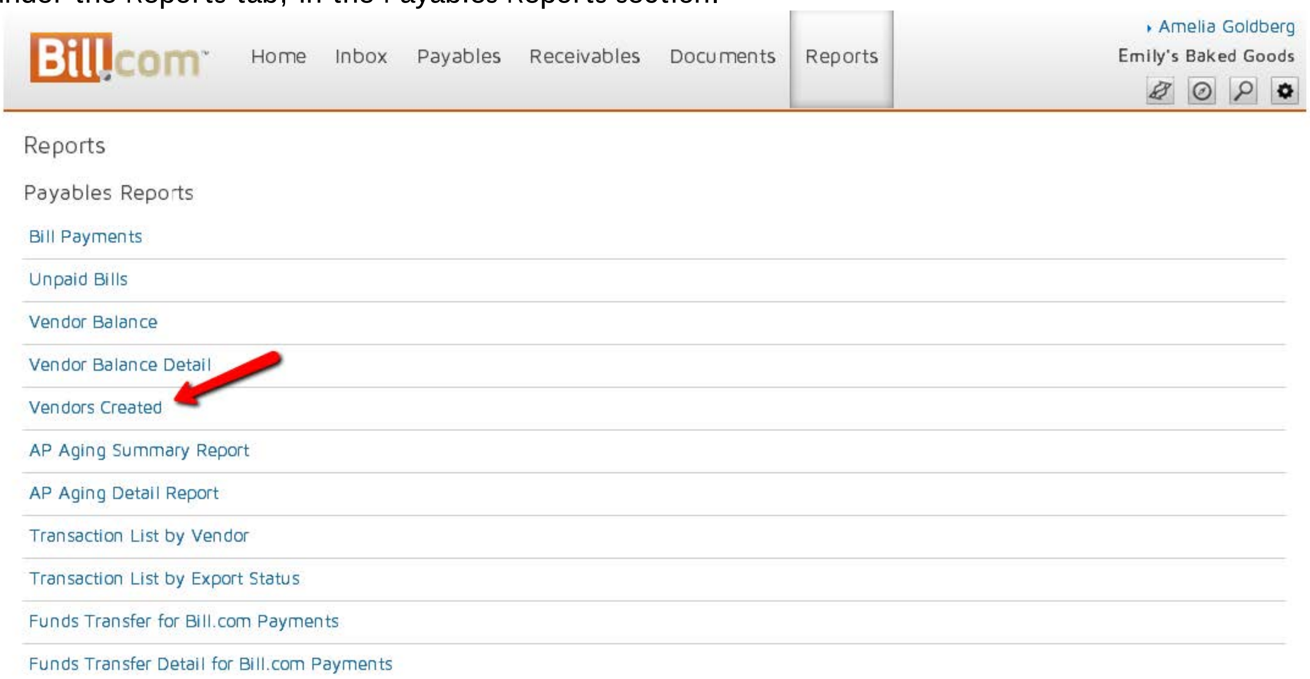
Fine-tuning Xero accounting preferences

You've asked for this feature, and now it's available! Now, users who sync with Xero can keep their accounting consistent with Xero, and enter Chart of Accounts when entering Invoices and Bills with Items into Bill.com!

[Showing Chart of Accounts on Bills and Invoice Items]()

Inbox Report (Vendors Created) moved to Reports tab

If you use our Data Entry Service, you may be used to seeing the 'Vendors Created' report accessible from within the Inbox. In order to keep everything streamlined and consistent, that report now lives under the Reports tab, in the Payables Reports section.



Improving the Feedback experience

We love getting feedback from you! To streamline the Feedback experience, and avoid confusion, we've removed the Feedback widget. Now, if you have a suggestion for a feature we don't have, or a way we can make something better, click the Support link at the bottom of any page in your Bill.com account to connect with Customer Support. This way, we can ask questions and gather more details about your idea or suggestion to share with the Product team. We look forward to hearing from you!

News for Accountants

Improved Demo Account experience

You will no longer see "Trial Ending" notifications in your Demo accounts, or receive them in your email – now you can use your demo accounts indefinitely.
